7.2 The order Accepted by restaurant
7.3 Starts preparation by the restaurant
7.4 Order is ready for pickup
7.5 A user arrives at the restaurant to pick up the order

1. Introductions:

A "Standard Operating Procedure" (SOP) is a detailed, written set of instructions that outlines the exact steps needed to complete a specific task or process within an organization, aiming to ensure consistency, quality, and efficiency in operations by providing a clear guide for employees to follow, minimizing errors and promoting uniformity across different teams or situations.

2. Objective:

- Consistency: Ensures tasks are performed uniformly across the restaurant section /Ecommerce department.
- Quality Control: Helps maintain high standards by defining clear steps and expectations.
- Efficiency: Streamlines workflows by providing clear instructions, reducing time spent figuring out how to do a task.
- Training Tool: Useful for onboarding new employees and providing ongoing training.
- Compliance: Can help the section/Ecommerce department to meet industry regulations and standards by documenting necessary procedures.

3. Major participants/stakeholders

3.1. External Participants

3.1.1 Restaurant

A restaurant is an establishment that prepares and serves food and drinks to customers using Cloud ERP.

3.1.2 Users/Consumer

User means any person who orders food or hot and soft drinks by downloading the Hulubeje E-Commerce Supper App or directly from Telebirr Super App.

3.1.3 Traffic police

Police officers, units, and agencies who enforce traffic laws and manage traffic.

3.1.4 Financial institutes/ Telecom companies

An institution that has agreed to work with our company on digital payments and has begun onboarding merchants.

3.2 Internal Participants

3.2.1 Section Head

The section Head is under the E-Commerce department which is responsible for developing content for the Hulubeje restaurant category, monitoring routine tasks from other departments and communicating with restaurants regarding order fulfillment.

3.2.2 Fleet management team

The Fleet management team is responsible for deploying, monitoring and supervising motorcycle drivers and making sure delivery of food, hot or soft drinks, as well as overseeing the safety of motorcycles and other related materials.

3.2.3 Hulubeje customer support

Hulubeje customer support is 9978, which helps users with any questions and support they may have when placing an order and after placing an order, and measures user satisfaction.

3.2.4 Driver

The driver is a person who receives the order of food, hot or soft drink ordered by the user from the merchant through the Hulubeje E-Commerce Super App and delivers it from the merchant to the user using motorcycles according to the set standard minutes.

4. Major Workflows to Category:

4.1 Create Awareness

Sign an Hulubeje Agreement

Upgrade a merchant to V7

4.2 Installing KOT Machine

4.2 Available digital payment options

4.3 Onboarding Restaurant to Hulubeje E-commerce

4.4 Develop contents

4.5 Develop test cases

4.6 Conduct internal and external tests

Conduct Demo to the restaurants

4.7 Enable restaurant in the Hulubeje category

4.8 Follow-up order fulfilments

5. Working Procedures:

5.1 Restaurant onboarding procedures

5.1.1 Check the availability of the KOT machine

5.1.2 Send a formal letter

5.1.3 Demonstrate end-to-end ordering process and provide training

5.1.4 Sign an agreement

5.1.5 Collect contents (audio visual team or agreed company)

5.1.6 Receive terms and conditions

5.2 Content development procedure

5.2.1 Insert default image

5.2.2 Insert company description

5.2.3 Insert company description

5.2.4 Insert company banner

5.2.5 Insert map

5.2.6 Insert working hour

5.2.7 Encode Articles

5.2.8 Insert pictures of articles encoded

5.2.9 Insert cuisine

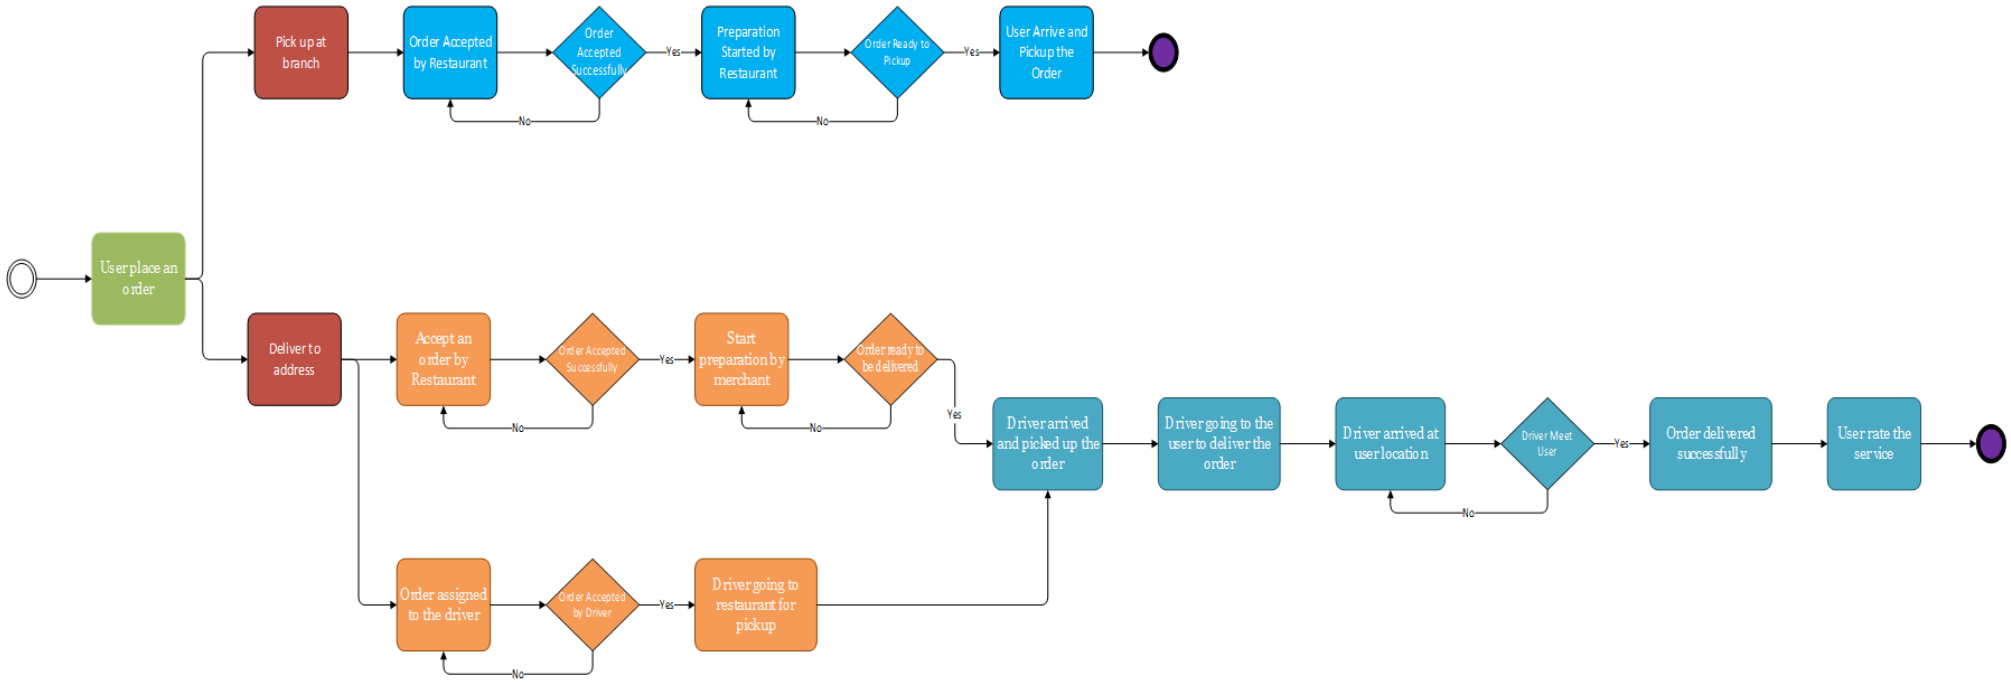

6. Order fulfillment procedure for delivery

The list of procedures under the table

Code	Name
6.1	A user places an order
6.2	Order Accepted by restaurant
6.3	Order assigned to the Hulubeje customer support
6.4	Order assigned to the driver
6.5	Order accepted by the driver
6.6	Driver going to pick up the order
6.7	Order preparation by the restaurant

6.8	Order ready to be delivered
6.9	The driver arrived and picked up the order
6.10	Driver going to the user to deliver the order
6.11	Driver arrived at user location
6.12	Driver meets the user and order is delivered successfully
6.13	User rate the service

Order fulfillment Sequence Diagram

Order fulfilment dictionary for delivery to address

Code	Title	Description
6.1	**A user places an order**	
	Description	A User subscribed Hulubeje platform browses a restaurant category, selects an item and paid by available payment methods
	Entry criteria	• The user must have a smartphone with an internet connection • User must be a Hulubeje subscribe, Mpesa and Telebirr SuperApp • User must have access to available payment methods with sufficient balance • User must select any of the delivery method options • Delivery, Self-pickup and Dine in • User must write or select from location profile clear specific location address /pin current location user pins the invited person exact location • User must be available 12km from the restaurant
	Exit criteria	• System must display an order confirmation screen on the user app • The user Receives SMS confirmation from the payment provider • The user Receives payment SMS confirmation from the Hulubeje platform • The user Receives SMS order detail confirmation from the Hulubeje platform
	Tools and resource	• Product and restaurant profiling • Smartphone • Internet connection /ISP • Payment Gateways

		• SMS service • Cloud hosting • App Store and Play Store subscriptions • Google API subscription	
	Tasks to be Done	• Browse by category/ by restaurant/ by food/ by cuisine • Add to cart • Order details must be verified • Terms and conditions must be acknowledged • Payment must be done • System send confirmation	
	Time constraint	6 minutes	
	Skill requirement	• Basic e-commerce app usage skill	
	Quality parameters	• Accurate, complete, and real product and restaurant profile	
	Risk management	**Risk Description**	**Mitigation Strategy**
		Connectivity issue • **Probability** = high • **Impact** = no order placed or very slow process	If the user notifies us of the issue, Hulubeje customer support should provide the following support: 1. refresh the phone network 2. close the app and open it again 3. change location 4. change data or Wi-Fi

			5. Contact ISP 6. Reload Data credit
		Delayance of payment notification from payment providers • **Probability** = medium • **Impact** = no order placed (if the payment option is OTP)	Communicate with the payment gateway provider and get the issue fixed Changing the Payment Method to USSD Push
		Hulubeje SMS message issue • **Probability** = Low • **Impact** = Hulubeje SMS confirmation didn't send	• Follow up message portal and recommend refill when getting low. • Communicate if the technical issues happened • Use the payment gateway provider SMS as an alternative option.
		User unable to sign up/log in • **Probability** = low • **Impact** = can't subscribe = can't place order Order placed mistakenly with dine in and takeaway option **Probability** = Medium	• The user may not be the subscriber, must be one • If the issue forget the password, execute the forget password procedure

		• **Impact** =
	Place of execution	User area within a 10 km range nearest to restaurant
	Stakeholders	• ISP • User • Hulubeje and Payment providers • SMS service provider
	General note	

6.2 Order Accepted by restaurant

	Description	This process indicates that the KOT and/or KDS machine started to process the order
	Entry criteria	A user places an order
	Exit criteria	• The KOT machine prints out the order and/or the KDS machine displays the order • The user must receive an “order received confirmation” status notification from the Hulubeje platform • The order is listed on the RMS POS cashier e-com reference tab
	Tools and resource	• KOT machine • KDS machine • Internet • Computer
	Tasks to be Done	• Monitor order status

		• Verify order details and item availability • Communicate with the user to verify incomplete order information	
	Time constraint	1 minute	
	Skill requirement	• KOT/KDS/POS machine knowledge for merchant • Product knowledge of dispatch portal • Communication	
	Quality parameters	• The assigned Hulubeje customer support should call the restaurant and verbally notify the new order arrival. • The KOT machine must accept and print orders within 3 minutes • KOT machine must work properly • Sustainable system, internet, and power availability	
	Risk management	**Risk Description**	**Mitigation Strategy**
		KOT machine failed **Probability** = high **Impact** = can't accept orders	• The Hulubeje customer support must follow-up the KOT/KDS status health check on the dispatcher dashboard and alert the technical support and or the client. • The Hulubeje customer support communicates with the restaurant and notify the new order in reference to the SMS received by the supervisor and POS reference. • The Hulubeje Customer Support communicates with the restaurant and notify the new order in reference to the Hulubeje Telegram order Bot • Notify the customer technical support/Project department to communicate with the restaurant and fix the KOT/KDS issues

			• The restaurant representative changes the status of the order from placed to received manually from the pos system so that the order will not be printed again to avoid duplicated order processing. • If this process takes a longer time to resolve and results in order delivery dalliance, the Hulubeje customer support should contact the user and explain and apologize. • Log the event on the daily event log book/system
		Restaurant remote system offline **Probability** = high **Impact** = wrong information or data disruption	• The Hulubeje customer support communicates with the restaurant and notify the new order in reference to the SMS received by the supervisor. • Change the order status on the dispatcher, so that the order will not be printed again to avoid duplicated order processing. • Notify the ISP to restore the connectivity to the restaurant • The Hulubeje customer support changed the status of the order from placed to received manually from the portal • If this process takes a longer time to resolve and results in order delivery dalliance, the Hulubeje customer support should contact the user and explain and apologize. • Log the event on the daily event log book/system
		Restaurant remote system offline and Hulubeje SMS is down. **Probability** = high **Impact** = wrong information or data disruption	• Execute manual order placing procedure as agreed with the restaurant. • Change the order status on the dispatcher, so that the order will not be printed again to avoid duplicated order processing. • Update the order status on the dispatcher.

			• If this process takes a longer time to resolve and results in order delivery dalliance, the Hulubeje customer support should contact the user and explain and apologize. • Log the event on the daily event log book/system
		Non-responsive merchant **Probability** = low **Impact** = order dalliance Payment confirmation issues and if the order payment is through card payment **Probability** = Medium **Impact** = Delayed delivery Decline the whole procedure to fulfill order delivery **Probability** = Low **Impact** = Delayed delivery	Use alternative contact detail If the primary and alternative contact is nonresponsive, the driver should physically go to the restaurant and communicate with the supervisor/manager Inform the restaurant about the event in writing for future improvement. If this process takes a longer time to resolve and results in order delivery dalliance, the Hulubeje customer support should contact the user and explain and apologize. Log the event on the daily event log book/system • The Hulubeje customer support inform the restaurant about the order payment entry • Direct deposit order value to the restaurant account to fulfill order delivery • If this process takes a longer time to resolve and results in order delivery dalliance, the Hulubeje customer support should contact the user and explain and apologize. • Execute manual order placing to the restaurant.

		Order placed with actual price difference **Probability** = Low **Impact** = Delayed delivery =Customer dissatisfaction POS machine under maintenance/annual service **Probability** = low **Impact** = order dalliance Sudden accidents to the restaurant/fire **Probability** = low **Impact** =	• If this process takes a longer time to resolve and results in order delivery dalliance, the Hulubeje customer support should contact the user and explain and apologize. • Communicate the restaurant and set further discussion to resolve any issues - The restaurant/customer support team will inform about the price difference to the customer and ask to fill the difference - If the customer willn't be volunteer for this situation, restaurant will be responsible to fulfill the customer's order - If this situation takes long time to deal and solve from the restaurant side, Hulubeje team will take responsibility and fullfil customer's order - Hulubeje team will follow this case to find solution

		Total system disfunctionality to fulfill order; KOT not printed, order doesn't appear on POS, no order text confirmation and no message on telegram bot **Probability** = low **Impact** = can't accept orders, delayed deliveries Restaurant branch closed but order is placed **Probability** = low **Impact** = can't accept orders, delayed deliveries	- nCustomer support will communicate the customer to send the order payment receipt for confirmation and asks for the ordered item, then communicate to the restaurant to order manually. - Driver will be assigned manually to deliver the order - Customer support will facilitate order fulfillment to be served from other branches (if the restaurant has). If the restaurant has no branches, based no customer preference refund or from other restaurant and food will be served.
	Place of execution	● At the restaurant ● Red Cloud main office (logistic coordinator)	
	Stakeholders	● Restaurant (kitchen and cashier) ● Hulubeje system	

		• User • Fleet management team

6.3 Order assigned to the Hulubeje customer support

	Description	The system automatically assigns available customer service offices to the newly accepted order.
	Entry criteria	The user placed an order
	Exit criteria	The order is assigned to the available Hulubeje customer support
	Tools & resource	• Smartphone • Internet package • Dispatcher web app • Call center resource
	The task to be done	• The Hulubeje customer support should be logged in to the system and be ready to accept orders • The Hulubeje customer support should refresh and reload the records • The assigned supervisor should confirm the placed order by calling to the restaurant
	Time constraint	• Under 1min
	Skill requirement	• Customer service and communication skill
	quality parameter	• The Hulubeje system assigns the available Hulubeje customer support • All Hulubeje customer support team must log in when available on schedule shift and logout when leaving for home.

	Risk management	**Risk Description**	**Mitigation Strategy**
		There is no available Hulubeje customer support	• The system should send an alert to the higher management about the unavailable Hulubeje customer support on SMS or telegram. • The manager should be reassigned to the available Hulubeje customer support. • Take over the order and supervise the order fulfilment.
		The system is assigned to non-logout but unavailable users.	• The manager should re assign to the available Hulubeje customer support
		Hulubeje customer support non responsive	• The system should alert the manager • The manager should re assign to the available Hulubeje customer support • After investigation of the situation the manager must take disciplinary action.
		System fails to assign a Hulubeje customer support The customer support supervisor couldn't reach to the restaurant/due to being non non responsive/ to confirm about the restaurant	• Utilize the delivery monitor telegram bot to check the assigned Hulubeje customer support. • The manager should assign manually available Hulubeje customer support to the order • Available Hulubeje customer support should take over the task.

		Probability = low **Impact** =	
	Place of execution	Office/home	
	Stakeholders	• System • Hulubeje customer support • Manager	
	General note		

6.4 Order assigned to the driver

	Description	The system rings automatically to available drivers based on the proximity to the restaurant and availability of the drivers
	Entry criteria	• The user placed an order
	Exit criteria	• The driver should review the pickup location carefully • The assigned driver accepts the order
	Tools & resource	• Driver • Smartphone • Internet package • Driver App • Delivery monitoring portal GPS and device GPS (traffic management)

		• Hulubeje delivery monitoring portal. • Motorbike	
	The task to be done	• The driver should be registered at the delivery monitoring portal • The driver app must be on duty • The driver should be available at an assigned location within 10KM • The system automatically identifies the nearest driver	
	Time constraint	• When the order is placed its have to be immediately assigned if the drivers on duty • Within 30 seconds have to be reassigned if the driver is off duty	
	Skill requirement	• Analytical and decision making	
	quality parameter	• The Hulubeje system assigns the nearest driver immediately • Within 5 seconds have to be reassigned if the drivers on duty	
	Risk management	**Risk Description**	**Mitigation Strategy**
		The driver accepts only one order at a time **Probability** = high **Impact** = order not assigned	Technology-assisted solution multiple order algorithm customization
		Fleet shortage **Probability** = high **Impact** = order cannot assigned	• optimize the area • add more fleet

		System failure to assign an order **Probability** = low **Impact** = delayed the assigning & miss information	• Take immediate action to resolve the issue with RND team and fleet supervisor • If the order is not assigned to the driver the fleet team must inform the drivers to be on duty and refresh the app • The Hulubeje customer support team must redispatch using the automatic redispatching option from the dispatch web.
		By any means, driver didn't hold the Phone **Probability** = low **Impact** = add unnecessary workload	• Make Strict rule • Reminding the drivers daily • Make available backup phone • The system immediately assigns another available driver within 5 sec • Re-dispatch the order to another driver • If this process takes a longer time to resolve and results in order delivery dalliance, the Hulubeje customer support should contact the user and explain and apologize.
	Place of execution	5KM nearest area to restaurant	
	Stakeholders	▪ Hulubeje Fleet management team and Hulubeje customer support. ▪ User ▪ Driver	
	General note		

6.5 Order accepted by the driver

	Description	The assigned driver reviews the order detail and accepts the order
	Entry criteria	▪ Order must be assigned to the driver.
	Exit criteria	▪ Driver accepted the order
	Tools & resources	● Driver app ● Driver portal ● GPS tracking system delivery monitoring portal & traffic management GPS ● Smartphone 25% or above battery ● Bike with 25% or above battery
	The task to be done	● Click the accept button
	Time constraint	Within 10 seconds must accept
	Skill requirement	● English language
	quality parameter	● Enough charge bike and near to the restaurant ● Within 10 sec the order must accept
	Risk management	**Risk Description** / **Mitigation Strategy**
		the driver only accepts one order at a time **probability** = high
		● Technology-assisted solution multiple order algorithm customization. ● Communicate with the customer and explain the situation of the delay.

		Impact = increases the number of pending orders. = increase order delay	
		limited motorbike battery percentage **probability** = high **impact** = limited order acceptance	• The driver must be off duty on the app • Notify about the situation for the fleet management team.
		The order cannot be accepted by the driver.	• Dispatch to all or specific driver
		Driver lack of English language skill **Probability** = medium **Impact** = miscommunication Delivery driver/fleet unavailable **probability** = low **impact** = Delayed deliveries	• Train and remotely assist • Technology-assisted multiple languages
	Place of execution	Driver within 10 km area to the	
	Stakeholders	• Driver • Fleet management team • Hulubeje system	
	General note		

6.6 Driver going to pick-up the order

	Description	The driver travels to the restaurant to collect the order
	Entry criteria	• Driver has accepted the order & go to the restaurant to pick up the order
	Exit criteria	• Arrive within a specific timeline
	Tools & resource	• Driver • GPS traffic management and delivery monitoring portal GPS • Smartphone • Motorbike
	The task to be done	• Navigate to the restaurant • Choosing the shortest route • Drive carefully to the restaurant • Utilize available map accurately
	Time constraint	• within 7 minutes must arrive at the pickup location
	Skill requirement	• Google map reading and understanding • Driving • Knowing major locations of the restaurants • Knowing the shortest path • Knowing restricted traffic areas
	Quality parameter	• Accurate GPS suggestion • Avoided traffic law mistakes

		• Arrive on time	
	Risk management	**Risk Description**	**Mitigation Strategy**
		sudden road closure/due to events **probability** = high **impact** = delayed pickup = high consumption of battery	• Knowhow of backstreet roads • Utilize updated information and take necessary adjustments based on rules and regulation • Choose unrestricted rout • The driver must inform the fleet management team • Inform the situation to the user and the merchant by Hulubeje customer support • The driver must implement driving technical rule
		motorbike dysfunctionality **probability** = low **impact** = add burden on all operation	• Utilize the SOS button on the app to notify the coordinator and assign another bike • The driver must call and inform the fleet management team • The order fulfillment Hulubeje customer support should re-dispatch the order to the nearest available driver.
		the city's poor deranged system and rain **probability** = high **impact** = increase the km range and waist battery	• Add pedal assist fleet • Choose a better road • Notify the customer about the situation.

		the overall lower ev bikes working capabilities **probability** = high **impact** = damaged bike and delayed order and injured the driver	• Train and advise drivers to drive extra careful • Consistent, constant and duly service and maintenance • Change the ev bikes to better quality two wheelers
		smart phone disfunctionality by any means **probability** = medium **Impact** = loss of contact with Hulubeje customer support and fleet management.	• The fleet team must follow up the drivers phone battery percentage based on the daily checklist. • The fleet team must follow up the drivers battery percentage on the dispatch web and notify them accordingly. • Manually execute the order • The driver must reach the restaurant supervisor and reach out to the Hulubeje customer support to notify the issue • Notify the customer about the situation by Hulubeje customer support • Track the driver location status using translink • The fleet team must utilize any available phone on hand.
		driver sudden sickness **probability** = low **impact** = add burden on all operation	• Utilize SOS button if applicable • Re dispatch to the backup driver
		GPS system down **Probability** = low **Impact** = blind for follow-up for the Fleet management team	• Use alternatively the available GPS • Traffic management GPS on the bike • Manually execute

		Proper knowledge of restaurant location **Probability** = low **Impact** = Delayed deliveries = Customer dissatisfaction	• The fleet team follow the driver on map and guide the driver to find the exact location • If the guidance will not help, customer support or the driver will communicate the restaurant to find the location
	Place of execution	Driver at 10 KM area of the restaurant	
	Stakeholders	• Driver • Hulubeje customer support • Hulubeje system • Fleet management team • Traffic police	
	General note		

6.7 Order preparation by the restaurant

	Description	The kitchen staff understands the order content and begins preparing the order.
	Entry criteria	• Order is accepted by the restaurant
	Exit criteria	• The order is prepared as the user requested on the printout • Ready for pickup and delivery
	Tools & resources	• Kitchen Equipment • POS/KOT/KDS system

	The task to be done	• Double-check order details before preparation • Start preparing the order	
	Time constraint	17 minutes preparation	
	Skill requirement	• Skilled and well equipped kitchen personnel • Time bound operation capabilities.	
	quality parameter	• Clear understanding of the order • Use a Kitchen Order Ticket (KOT) system to prevent errors. • Order must be prepared within the specified time keeping proper hygiene requirements and industry standards • The order must fulfil every requirement exactly as displayed by Hulubeje e-commerce platform.	
	Risk management	**Risk Description**	**Mitigation Strategy**
		unavailable item order **probability** = medium **impact** = refund and customer frustration	• Advice and train merchant how to remove unavailable items • The restaurant should communicate the customer to explain the situation and the options that are available to make • If the restaurant has branches, • Daily remind the restaurants by Hulubeje customer support personnel to remove unavailable items
		Longer preparation time, backlog of orders. **Probability** = high **Impact** = blind for follow up for the Hulubeje customer support	• Suggest to Improve kitchen workflow • prioritize delivery orders • The driver must inform the restaurant supervisor and the Hulubeje customer support should communicate with the user and the restaurant

		= increase customer dissatisfaction	
		Electric power disruption **Probability** = high **Impact** = increase customer dissatisfaction = delay on the order delivery	• Deliver the order from near branches • Backup generator • Use gas fueled stove tabs
	Place of execution	At the restaurant	
	Stakeholders	• Driver • Kitchen staff and supervisor • Cashier • Hulubeje customer support	
	General note		

6.8 Order ready to be delivered

	Description	The user ordered food is prepared, packed and ready for delivery
	Entry criteria	• Order is fully prepared & packed
	Exit criteria	• The order is fully ready and packaged as per the required standard • The cashier prints the receipt
	Tools & resource	• Order packaging materials • POS system

	The task to be done	• Constant follow-up by the driver and cashier/waiters • Pack properly with the provided HB packaging material • Put the order on the desk • Order man/Chief will notify the waiter , cashier or the supervisor that the order is ready • The cashier notifies the driver the order is ready for pickup	
	Time constraint	3 minutes to be ready	
	Skill requirement	• Fast packaging & Good packaging • Good communication • Order man /chef/ Supervisor/cashier must be well-aligned	
	quality parameter	• The correct items, quantities, and special requirements are provided • Food must maintain its intended temperature upon delivery (hot stays hot, cold stays cold) • Secure, spill-proof, and tamper-evident packaging. • Order is ready within the promised timeframe	
	Risk management	**Risk Description**	**Mitigation Strategy**
		order misplacement discovered during the task **probability** = Medium **impact** = Customer dissatisfaction and complaints due to waiting time = Operational inefficiencies due to handling complaints	• Implement a double-check process before packaging by the responsible restaurant personnel • Kitchen staff to confirm order details before pick up preparation done by drivers • Communicate the user about possible options to commence on via Hulubeje customer support.

		POS System failure due to multiple reasons - Cashier privilege to invoice e-commerce order **probability** = high **impact** = customer order delay	• The Hulubeje customer support must contact the restaurant representative and provide a manual receipt for the driver. • Customer support team will avail privilege to the cashiers based on the procedures on the system • The Hulubeje customer support must contact the customer about the situation and make sure they get the receipt.
		poor packaging **probability** = Medium **impact** = Food spills or damage during transit Reduced food quality (cold, soggy, or contaminated)	• Implement a final quality check properly sealed & packed before handing the order to the driver. • The driver must ensure the order is properly packaged as per the standard set and if not he must inform the restaurant supervisor immediately.
	Place of execution	At restaurant	
	Stakeholder	• Driver • POS system • Restaurant and restaurant staff • Hulubeje customer support	
	General note		

6.9 The driver arrived and picked up the order

	Description	The driver from dispatched area or return from order delivered to the users arrived at the restaurant and crosschecks the order from the driver app and collects the order from the restaurant
	Entry criteria	• Receipt is printed and order is marked as ready

		• The driver has reached the restaurant
	Exit criteria	pick up the order and be ready to go to the user
	Tools & resource	• Mobile phone • Delivery portal and traffic management GPS • Motorbike • Receipt
	The task to be done	• Arrive at the restaurant • Driver updates his status on the driver app • Verify order details against order details communicated to the restaurant • Take the receipt from the cashier • Check the package is well packed and sealed • Pick up the order and put appropriately to the box and get ready to leave the restaurant location
	Time constraint	The driver waiting time to pick up the order should not be more than 20 minutes and the driver arrival time to the restaurant must be within 7 minutes
	Skill requirement	• Good communication • Attention to detail • Reading English language • Driving skills
	quality parameter	• Order Accuracy • Food Temperature

		• Packaging Integrity • Timely Handover	
	Risk management	**Risk Description**	**Mitigation Strategy**
		Order not ready as per set standard time **Probability** = high **Impact** = Customer dissatisfaction, refund requests, negative reviews.	• The driver should alert the responsible restaurant personnel to minimize wait time for the order. • Hulubeje customer support should communicate with the restaurant (supervisor) to adhere to standard time set on the agreement. • Use real-time order status updates (technology-assisted solution)
		Discovery of order mix-up (wrong order given to driver) **Probability** = low **Impact** = Poor food presentation, = Complaints loss of product	• If driver makes the discovery he will immediately inform restaurant personnel (cashier , supervisor) and immediate adjustment action will be undertaken • Kitchen staff puts the printed order ticket with the order until a driver takes the order • Cross-check KOT printed order with the driver App accepted order details before handover
		Spillage or package damage during handover **Probability** = low **Impact** = Poor food presentation, = complaints, = loss of product = Possible refund or remake	• Driver must immediately communicate responsible restaurant personnel (cashier , supervisor) to change the packaging or remake the order • Train staff on careful handling • Urge the restaurant to use high quality and secure packaging and perform a final check before handover

			• Hulubeje customer support in case of remake of the order will communicate the customer and execute available options (refund/wait)
		Restaurant staff miscommunication with the driver **Probability** = low **Impact** = Delayed orders = confusion in handover = wrong order received.	• Use a clear order confirmation process by utilizing order voucher code and user phone number • Train staff on effective communication, and provide written/verbal order confirmation
		driver delay **probability** = low **impact** = food condition will change to cold	• Hulubeje customer support will communicate with the driver assigned specific orders. • Hulubeje customer support will re dispatch to the nearest drivers • Under extreme circumstances, Hulubeje customer support team will reach out to the Fleet management team • Hulubeje customer support team will reach out to the restaurant and user
	Place of execution	At the restaurant	
	Stakeholders	• Driver • Restaurant supervisor/ manager/ cashier • Hulubeje customer support • Traffic police	
	General note		

6.10 Driver going to the user to deliver the order

	Description	The driver pick up the order from the restaurant, clicks “start ride” from driver App and heads to the users based on registered specific location on the map
	Entry criteria	• Order is picked up by the driver
	Exit criteria	Driver arrives at the registered specific user's location
	Tools & resources	• Monitoring delivery portal GPS and traffic management GPS • Google map • Motorbike • Smart phone • Driver • Driver App • Hulubeje customer support and Fleet management team
	The task to be done	• The user’s address is confirmed by the driver • The driver press “Start Ride” button on the app • The driver secures the meal and wears his full gear • Start the bike and drive carefully adhering to all traffic laws and regulations • Navigate to the delivery address • Chose shortest path • Follow up by Hulubeje customer support • Arrive at the registered location of the user
	Time constraint	20 minutes

	Skill requirement	• Driving skill • Knowledge of city routes • Map reading skill • Standard communication skill	
	Quality parameter	• Food Temperature • Packaging Integrity • Proper food sorting in the motor box • Delivery time Accuracy • Optimum route selection • Hygiene & Safety	
	Risk management	Risk	Mitigation
		Traffic Congestion **Probability** = high **Impact** = Delayed delivery = Cold food = Customer dissatisfaction	• Hulubeje customer support must call the user to notify and apologize about the delay. • Driver utilizes routes based on his previous experience • Use optimized GPS routes • The driver notifies about the situation to the Hulubeje customer support using status on the driver app • The Hulubeje customer support notifies the user using a push notification alert.

			• The fleet supervisor suggests routes using push notification to the Hulubeje driver.
		On operation incorrect delivery address discovery **Probability** = low **Impact** = Driver gets lost = late delivery = customer frustration.	• Immediate report to Hulubeje customer support by the party who made the discovery • Hulubeje customer support immediately notifies the driver and the customer • The driver will make necessary adjustments as soon as possible • Strictly follow the newly adjusted registered user address instructed from Hulubeje customer support
		Accidents on the motorbike/driver **Probability** = medium **Impact** = Delivery failure = food waste = Increase operational costs = Unexpected delay	• The driver should inform the fleet supervisor and the order supervisor using SOS by attaching evidence of the accident. • Hulubeje customer support checks the last status of the driver before SOS and if the last status of the driver is before “Arrived at Branch” the Hulubeje customer support redispatches the order using automatic redispatching option. • If the automatic redispatching of the order by the customer support fails, the fleet team should redispatch the order by selecting nearby drivers. • If the last state of the driver is after “Arrived at Branch” state the fleet team should redispatch the order using change status option from the dispatch web

			• Hulubeje customer support communicates the user and suggests available options (wait, remake the order or refund from Hulubeje) • Have sufficient alternative drivers for reassignment
		Spillage or Food Damage **Probability** = Medium **Impact** = Customer dissatisfaction = Refunds = brand reputation damage. = Order Delay	• The driver should immediately notify the Hulubeje customer support and fleet team explaining the situation using Status from the driver app, if necessary by attaching the food image. • The Hulubeje customer support will communicate with the customer and explain if there is delay • The food should be reordered and redcloud ICT Solution plc should cover the cost and the order Hulubeje customer support will communicate with the restaurant about the situation to make sure all legal receipts are made available for the restaurants • If the driver is responsible for food spillage or damage the driver should cover the cost, investigation about the scenario will be open and the driver should send all the evidences; call record, screenshot of texts and location on GPS. • Avail separate petty cash for such scenarios to avoid customer dissatisfaction • Use secure food packaging

			• Put the food package proper position in the box • Drive safely into consideration of the food package • Train drivers on careful handling • Provide insulated delivery bags
		Driver Communication Issues **Probability** = medium **Impact** = Difficulty in reaching the customer = failed delivery attempts.	• After multiple failed attempts of reaching the customer the driver notifies Hulubeje customer support for full on takeover. • Hulubeje customer support fully takes over the communication and mediates between all stakeholders until the order is complete • Allowing users to track the driver via map. • Deploy accurate map for the driver app
		Known road closure issue due to religious and public holidays **Probability** = Low **Impact** = Difficulty in reaching the customer = failed delivery attempts	- Manage and prepare different delivery working time on system for the holidays - Send early notification to customers through the application and sms tex about the service that is going to be provided as for the day
	Place of execution	12 km area from the restaurant to the user	

	Stakeholders	• Driver • User • Fleet management team and Hulubeje customer support
	General note	

6.11 Driver arrived at user location

	Description	The driver reaches the user specific registered address from the restaurant within 20 minutes to deliver the food package
	Entry criteria	• The driver arrives at the user specific registered place
	Exit criteria	• The driver and the user both meet at the pre specified location by the user
	Tools & resource	• GPS tracking system • Driver App • User App • Motorbike • Mobile phone
	The task to be done	• Park the bike properly and safe place • Go to a specific location for the user • Click on the “Arrived” button on driver app to update his status • Users gets in-app notification status update • Confirm users location • Start preparing to hand over the order

	Time constraint	3 minutes	
	Skill requirement	Communication	
	Quality parameter	• Location Accuracy • Timely Delivery • Order availability • Packaging Integrity	
	Risk management	**Risk Description**	**Mitigation Strategy**
		Incorrect address or difficult-to-locate the location **Probability** = low **Impact** = Driver may waste time searching for the address. = Late delivery, affecting customer satisfaction.	• The driver will communicate with the user by phone call • Upon discovery of incorrect address provided from the customer the driver will immediately notify Hulubeje customer support and fleet management using status on the drivers app respectively • Hulubeje customer support will communicate with the customer to get the customer's accurate location. And upon provision of the location Hulubeje customer support will then commence providing the location to the driver
		Drivers goes to wrong location **Probability** = low **Impact** = Driver may waste time searching for the address.	• The driver will communicate with the user verbally to get the customer's accurate location. • The driver notifies the Hulubeje customer support and then commences to deliver the order to the correct location

		= Late delivery, affecting customer satisfaction.	• Upon discovery of the wrong route Hulubeje customer support will communicate with the customer and apologize and continue to follow up the order until end
		Extreme weather conditions **Probability** = low **Impact** = Risk of food getting cold or damaged. = Possible accidents or safety concerns.	• The driver must wear raincoat • The driver must make sure the delivery box is secured • Set slight flexibility in delivery time for extreme weather conditions.
		Security issues (theft, unsafe delivery area) **Probability** = low **Impact** = Risk to driver safety. = Potential order loss. The driver arrived on time but couldn't find the customer	• The driver is required to deploy safety measures based on delivery location • Implement a real-time support system for issue resolution (SOS button must be on driver app) • Upon the discovery of a security threats the driver will immediately evacuate the area with the order and notify Hulubeje customer support of the issue • In the occurrence of theft the driver must notify Hulubeje customer support • Hulubeje customer support notifies the user about the occurrence and the driver takes full responsibility based on customer preference • Having in advance cash to purchase the order by Redcloud Finance in the case of order loss that will later be deducted from the driver salary. • The driver must inform to the fleet team/customer support about the situation

		Probability = low **Impact** = Delayed deliveries .	• Driver must try calls repetitively or text to the customer and wait for their responses • If the customer is not responsive for delivery driver, customer support team should communicate to the customer
	Place of execution	At User place	
	Stakeholders	• Driver • User • RedCloud Finance • Fleet management team and Hulubeje customer support	
	General note		

6.12 Driver meets the user and order is delivered successfully

	Description	The driver meets the user physically at the specified location and delivers the order
	Entry criteria	The driver and the user both meets at the agreed location
	Exit criteria	The order is delivered successfully
	Tools & resources	• Smart phone • Driver App • Customer app • Delivery monitoring portal • Google map

		• Properly packed order	
	Task to done	• The driver arrive at the location and call to the user • The driver meet the user physically • The driver verify the user • The user verify and accept order • Update order status on the driver app must be completed • Hulubeje user App gives delivery confirmation notification	
	Time constraint	3 minute	
	Skill requirement	• Communication • Map reading skill • Quick decision-making	
	Quality parameter	• Properly identify or verify the exact user or representatives by using order detail • The delivered order must matches with the placed order • Food temperature must be hot, food remains hot, and cold food remains cold using insulated bags. • Packaging integrity must be no spills, leaks, or damage during transportation • The delivery time must meet the ETA of the order • The driver's interaction with customers must be professional, polite, and ensure customer satisfaction.	
	Risk management	**Risk Description**	**Mitigation Strategy**
		The user unreachable or unavailable **Probability** = low **Impact** =order dalliance	• The Driver calls/message the user upon arrival • If the driver is aware of the user's location, they proceed directly to that location to meet the user.

		= delivery delays = obstacle to manage the operation = Additional trips	• Send notifications of the arrival of the delivery if the customer is unreachable within 3 minutes using push notification alert by Hulubeje customer support • The driver must inform the Hulubeje customer support to implement a fallback procedure leave at the reception if pre-approved either by Hulubeje customer support or by the user. • The driver must record the call conversation about the unreachability with the user in addition to by attaching the current location of the driver .
		The customer receives incorrect items due to an order mix-up **Probability** = low **Impact** = Customer dissatisfaction, = refund requests = negative reviews.	• The driver must inform the situation to the Hulubeje customer support and the Hulubeje customer support must communicate the restaurant • The Hulubeje customer support must communicate the user and apologize and asks the users preference whether remake or refund of the order • Based on the user preference the restaurant or the driver must take full responsibility
		Food arrives cold or spilled due to improper handling or long travel time **Probability** = Low	• The driver must apologize to the user about the incident • If the user refused to receive the order the driver must inform to the Hulubeje customer support

		Impact = Poor food quality = complaints = loss of brand trust. = refund requests	• The Hulubeje customer support must communicate the user and apologize and asks the users preference whether remake or refund of the order • Based on the user preference the driver must take full responsibility to fulfill the order fulfillment. • Implement a maximum delivery time per order
	Place of execution	At the agreed user location	
	Stakeholders	• Driver • User • Restaurant • Hulubeje customer support • Logistic Team	
	General note		
6.13 User rates the service			
	Description	The user rates and gives feedback regarding overall Hulubeje food order experience	
	Entry criteria	The driver clicks on the “Complete” button and the review page pops up on the user’s app	
	Exit criteria	The user rates, gives feedback and submitted successfully	
	Tools	• Hulubeje user app • Hulubeje driver app	

		• Delivery monitoring portal	
	Task to done	• The driver clicks on the “Complete” button after successfully delivering the order • The driver must remind the user to give feedback and rate • The user gives feedback and rate • The logistic team organize and analyze the feedback and rate as a KPI to measure drivers performance • The Hulubeje customer support team must collect the user’s feedback for Hulubeje service improvement.	
	Time constraints	2 minutes	
	Skill requirement	Basic E-commerce app usage skill	
	Quality parameter	• Service Quality • Delivery accuracy • Customer satisfaction Transparency • Fair evaluation • Delivery time adherence • Order handling efficiency • Customer engagement	
	Risk management	**Risk Description**	**Mitigation Strategy**
		Poor customer experience leads to low ratings. **Probability** = low **Impact** = Damages brand reputation.	• Monitor the overall food order operation according to the given standard • Ensure timely delivery and proper order handling • Train customer service teams to address complaints promptly

		= Reduces customer retention and sales.	
		Competitors or customers may leave unfair reviews **Probability** = medium **Impact** = Misleads other customers = Can harm business credibility	• The system must allow restaurants and drivers to respond to feedback
		Hulubeje System delay **Probability** = medium **Impact** = rating not submitted	• Actively communicate with R&D and gives solutions on time
		Customers may not leave ratings, reducing data for service improvements **Probability** = medium **Impact** = Missed opportunities to improve service	• Send automated feedback reminder to user (technology assisted solutions) • The driver must remind the user to give feedback and rate • Offer incentives for reviews (e.g., points, discounts)
	Place of execution	At the user place	
	Stakeholders	• User • Driver	
	General note		

7 Order fulfillment procedure for self-pickup

Code	Name
5.3.14	A user places an order
5.3.15	The order Accepted by restaurant
5.3.16	Start preparation by the restaurant
5.3.17	The order is ready to pick up
5.3.18	A user arrives at the restaurant to pick up the order

8 Order fulfilment dictionary for self-pickup

	Risk management	**Risk Description**	
		Connectivity issue **Probability** = high **Impact** = no order placed or very slow process	▪

		Dalliance of payment notification from payment providers **Probability** = medium **Impact** = no order place (if the payment options is OTP)	
		Hulubeje SMS message issue **Probability** = Low **Impact** = Hulubeje SMS confirmation didn't send	▪
		User unable to sign up /login **Probability** = low **Impact** = can't subscribe = can't place order	
	Place of execution	At the user place	
	Stakeholders	▪ User ▪ Restaurant	
	General note		

7.1. A user placed an order

	Description	A person subscribed Hulubeje platform browses a category and selects an item paid for by available payment methods

	Entry criteria	▪ The user must have a smartphone with an internet connection ▪ User must be a Hulubeje subscriber ▪ User must have access to available payment methods with sufficient balance ▪ User must select any of the delivery method options ▪ User must write or select from location profile clear specific location address /pin current location ▪ The user must be available 5km from the (for only delivery method)
	Exit criteria	▪ System must display an order confirmation screen ▪ Receive SMS confirmation from the payment provider and ▪ Receive SMS confirmation from the Hulubeje platform
	Tools & resources	▪ Product and restaurant profiling ▪ Smartphone ▪ Internet connection /ISP ▪ SMS service ▪ Cloud hosting ▪ App Store and Play Store subscriptions ▪ Google API subscription
	Task to done	▪ Browse by category /by restaurant /by food /by cuisine/ ▪ Add to cart ▪ Order details must be verified ▪ Terms and conditions must be acknowledged

		▪ Payment must be done ▪ System send confirmation	
	Time constraints	6 minutes	
	Skill requirement	Basic e-commerce app usage skill	
	Quality parameter	▪ Accurate, complete, and real restaurant and product profile	
			Mitigation Strategy
			If the user notifies us of the issue, customer support should provide the following support: ▪ refresh the phone network ▪ close the app and open it again ▪ change location ▪ change data or WiFi
			Communicate the payment gateway provider and get the issue fixed
			▪ Follow up message portal and recommend to refill when getting low ▪ Communicate if the technical issues happened
			▪ The user may not be the subscriber

			▪ If the issue forget the password, execute the forget password procedure Check if the user is on the list
		▪	

7.2 The order Accepted by restaurant

	Description	This process indicates that the KOT and/or KDS machine started to process the order
	Entry criteria	A user places an order
	Exit criteria	▪ The KOT machine prints out the order and/or the KDS machine displays the order ▪ The user must receive an "order received confirmation" status notification from the Hulubeje platform ▪ The order is listed on the RMS cashier e-com reference tab
	Tools & resources	▪ KOT machine ▪ KDS machine ▪ Internet ▪ Computer
	Task to done	▪ Monitor order status ▪ Verify order details and item availability with the restaurant

		▪ Communicate with the user to verify incomplete order information	
	Time constraints	3 minutes	
	Skill requirement	▪ KOT/KDS/POS machine knowledge for merchant ▪ Product knowledge of delivery monitoring portal ▪ Communication	
	Quality parameter	▪ The KOT machine must accept and print orders within 3 minutes ▪ KOT machine must work properly ▪ Sustainable system, internet, and power availability	
	Risk management	**Risk Description**	**Mitigation Strategy**
		KOT machine failed **Probability** = high **Impact** = can't accept orders	▪ The logistic coordinator communicates the and places the order verbally ▪ Notify the customer technical support to communicate with the and fix the KOT/KDS issues ▪ The logistic coordinator changed the status of the order from placed to received manually from the portal
		Merchant remote system offline **Probability** = high **Impact** = wrong information or data disruption	▪ The logistic coordinator communicates the restaurant and places the order verbally ▪ Notify the ISP to restore the connectivity to the restaurant

			▪ The logistic coordinator changed the status of the order from placed to received manually from the portal
		Non-responsive merchant **Probability** = low **Impact** = order dalliance	▪ Use alternative contact detail If the primary and alternative contact is nonresponsive, the driver should physically go to the restaurant and physically communicate with the supervisor /manager
	Place of execution	At the restaurant	
	Stakeholders	▪ Restaurant ▪ Hulubeje system ▪ User ▪ Logistics Coordinator	
	General note		
7.3 Starts preparation by the restaurant			
	Description	The kitchen staff understands the order content and begins preparing the order	
	Entry criteria	Order is accepted by the restaurant	
	Exit criteria	▪ The order is prepared as the user requested on the printout. ▪ Ready for pickup and delivery	
	Tools & resources	▪ Kitchen Equipment ▪ POS/KOT/KDS machine	

	Task to done	▪ Double-check order details before preparation. ▪ Prepare the order	
	Time constraints	20 minutes preparation	
	Skill requirement	-	
	Quality parameter	▪ Clear understanding of the order ▪ Hygiene ▪ Use a Kitchen Order Ticket (KOT) system to prevent errors.	
	Risk management	**Risk Description**	**Mitigation Strategy**
		unavailable item order **probability** = medium **impact** = refund and customer frustration	▪ Advice,train, and followup on restaurant to remove unavailable items ▪ The restaurant must communicate the user Immediately ▪ The restaurant must refund to the user
		Longer preparation time, backlog of orders. **Probability** = high **Impact** = blind for followup for the logistics coordination	▪ Suggest the to Improve kitchen workflow ▪ Prioritize orders based on delivery urgency and agreement ▪ The driver must inform the coordinator and the coordinator should communicate the user and the restaurant supervisor /manager
	Place of execution	At the restaurant	

	Stakeholders	▪ Restaurant kitchen staff, supervisor /manager and cashier
	General note	

7.4 Order is ready for pickup

	Description	The confirms the order is packed and ready for self pickup	
	Entry criteria	Order is fully prepared considering the user arrival time & packed	
	Exit criteria	▪ The cashier prints the receipt ▪ The user arrives and receives the package	
	Tools & resources	Order packaging materials	
	Task to done	▪ The restaurant section head follow up the readiness of the ordered food ▪ The restaurant section head remind the user ▪ Pack properly with the provided Hulubeje packaging material ▪ The cashier give the order to the user	
	Time constraints	20 minutes to be ready	
	Skill requirement	▪ Fast & Good packaging ▪ Communication ▪ The chef/ Cashier must be well-aligned	
		Risk Description	**Mitigation Strategy**

		Order is prepared early or delay from the user chosen time **Probability** =Medium **Impact** =user dissatisfy = refund request	▪ Restaurant section head remind and follow up the restaurant about the order status ▪ The restaurant must refund to the user
		The user arrive early or latently from the ordered time **Probability** =Medium **Impact** =the restaurant rush to prepare the order or the order lose intended temperature	▪ The Hulubeje customer support must remind and follow up the restaurant and the user about the order status
	Quality parameter	▪ The restaurant must understand the user arrival time and preparation period ▪ The correct items, quantities, and special requirements are provided ▪ Food must maintain its intended temperature upon delivery (hot stays hot, cold stays cold) ▪ Secure, spill-proof, and tamper-evident packaging ▪ Order is ready within the promised timeframe	
	Place of execution	At the restaurant	
	Stakeholders	▪ Restaurant ▪ User ▪ Restaurant section head	
	General note		

7.5 A user arrives at the restaurant to pick up the order			
	Description	The user navigates the location of the restaurant, arrive at the exact order time and collects the order	
	Entry criteria	Order is ready to pick up	
	Exit criteria	The user check the prepared order and collect the order	
	Tools & resources	▪ Hulubeje branded packaging	
	Task to done	▪ Find the exact location of the restaurant ▪ Cross-check the order with his phone ▪ Collect the order	
	Time constraints	10 minutes	
	Skill requirement	-	
		Risk description	**Mitigation strategy**
		Order is prepared early or delay from the user chosen time **Probability** =Medium **Impact** =user dissatisfy = refund request	▪ Restaurant section head remind and follow up the restaurant about the order status ▪ The restaurant must refund to the user

		The user arrive early or latently from the ordered time **Probability** =Medium **Impact** =the restaurant rush to prepare the order or the order lose intended temperature	▪ Restaurant section head remind and follow up the restaurant and the user about the order status
	Quality parameter	▪ The user finds the food within the 20-minute time frame ▪ Proper packaging	
	Place of execution	At the restaurant	
	Stakeholders	▪ User ▪ Restaurant	
	General note		

8. Order fulfillment procedure for Dine-in

Code	Name
8.1	A user places an order
8.2	The order Accepted by restaurant
8.3	Start preparation by the restaurant
8.4	The order is ready to be served
8.5	A user arrives at the restaurant to dine in

8.1 A user place an order

	Description	The user

8. Driver dispatch procedure

8.1 Check personal hygiene, cleanness, and dressing code of drivers

8.2 Check the motorcycle's basic functionalities and properly charged

8.3 Make sure have enough data package, the driver App proper functionality, and the smartphone's physical status

8.4 Make sure all legal documents are ready

8.5 Conduct morning briefing

8.6 Arrange drivers in a team

8.7 Assign teams to a specific location

8.8 Follow up tracking GPS and make sure all drivers are available at the assigned location

8.9 Make sure all drivers are online (on duty) and ready to accept orders

8. 10 Make sure the driver is driving on permitted routes

1o Roles and duties:

10.1 Restaurant roles and duties

10.1.1 Ensure that it has at least one functional telephone located at the merchant responsible for deliveries (ideally two with one being a smartphone) in case of network failures or other unpredicted scenarios.

10.1.2 Responsible for fulfilling each order exactly as the order communicated by the application. Any differences in order items, quantities, and details are the responsibility of the merchant. In the event that an order item is incorrect and delivered to the user, the merchant is responsible for the payment of that item.

10.1.3 Orders should be ready for pickup in no more than 20 minutes after the order is placed by the user.

10.1.4 Must provide sealed, opaque packaging for the order that will minimize the risk of any contents being damaged or coming loose during transit.

10.1.5 Must be responsible in making sure that the information on the Hulubeje E-commerce super App article is up to date. Their prices, location, contact telephone number updates, working hours, and business interruptions.

10.1.6 Should a user place an order for an item through Hulubeje E-commerce super App and the merchant currently does not have the

item, they must directly contact the customer by phone to explain and provide alternative options. If the options are not suitable to the customer, the customer has the right to cancel the order and collect the reimbursement from the merchant as soon as possible, not more than 72 hours.

10.1.7 Must provide a VAT receipt for each order given to the driver picking the order from the merchant.

10.2 Logistics coordinator and supervisor roles and duties

10.2.1 Coordinate and schedule deliveries of food to users, ensuring timely and accurate delivery.

10.2.2 Plan and optimize delivery routes to minimize costs and maximize efficiency.

10.2.3 Collaborate with suppliers, vendors, and internal teams to ensure adequate inventory levels and timely replenishment.

10.2.4 Monitor delivery operations, track shipments, and address any issues or delays proactively.

10.2.5 Maintain accurate records of inventory levels, deliveries, and transportation activities.

10.2.6 Communicate effectively with drivers, providing necessary instructions and support to ensure smooth operations.

10.2.7 Evaluate and improve logistics processes to enhance efficiency and user satisfaction.

10.2.8 Ensure compliance with safety regulations and company policies throughout the transportation process.

10.2.9 Handle user inquiries and complaints regarding delivery issues promptly and professionally.

10.2.10 Train and onboard new delivery drivers, providing them with necessary guidance, instructions, and resources to perform their duties effectively.

10.2.11 Monitor driver performance and productivity, identifying areas for improvement and implementing corrective actions as needed.

10.2.12 Serve as the primary point of contact for drivers, addressing their concerns, providing support, and facilitating open communication between drivers and management.

10.2.13 Conduct regular inspections of delivery vehicles to ensure they are properly maintained and comply with safety regulations.

10.2.14 Assist with the planning and execution of special delivery projects or events, such as promotions, seasonal campaigns, or large-scale orders.

10.2.15 Maintain accurate records of delivery activities, including driver schedules, vehicle inspections, and performance metrics.

10.2.16 Foster a positive work environment among delivery teams, promoting teamwork, respect, and a strong sense of accountability.

10.3 Driver roles and duties

10.3.1 Safely and responsibly operate delivery vehicles to transport foods to designated locations, adhering to traffic laws and safety regulations.

10.3.2 Load and unload food orders onto delivery vehicles, ensuring proper handling and secure placement to prevent damage during transit.

10.3.3 Plan and optimize delivery routes to minimize travel time and maximize efficiency, using GPS navigation systems or route optimization software.

10.3.4 Verify orally the accuracy of delivery orders and ensure they match user specifications or purchase records.

10.3.5 Provide excellent user service during deliveries, greeting users courteously, and addressing any questions or concerns they may have.

6.3.6 Issue received receipts from restaurant to users.

6.3.7 Communicate effectively with dispatchers or supervisors to provide updates on delivery status, report any issues or delays, and follow instructions promptly.

6.3.8 Conduct routine inspections of delivery vehicles, check for any issues or maintenance needs, and report findings to the appropriate personnel.

6.3.9 Maintain cleanliness and organization of delivery vehicles, both inside and out, to ensure a professional appearance and hygienic conditions for transporting food orders.

6.3.10 Adhere to company policies and procedures, including those related to safety, sanitation, and customer service, at all times.
